Development of transalpine transit traffic through Switzerland on the railway

Definitions

Conventional traffic

WLV = Wagonload traffic with traditional freight wagons.

Combined traffic

UKV = The unaccompanied combined traffic is a future-oriented traffic system based on containers which can be transported on special railway wagons, on road lorries, and in part also on ships. Among them are high-volume containers, swap bodies and semi-trailers. They are transshipped by cranes.

RLS = The Rolling Road (both the driver and his lorry are travelling on the train) is an offer directed to road hauliers who have not (yet) adapted their fleet for unaccompanied combined traffic. The driver drives the whole lorry onto the train composed of low-floor wagons with continuous loading platform. The driver is accommodated in a special carriage where he can rest.

Nota bene: payloads

In combined traffic, the tare weight of the road vehicle (lorry, semi-trailer), resp. of the swap body or high-volume container is included. With wagonload traffic, only the weight of the transported goods is charged.

A presentation taking only the weight of the transported goods into account, is edited by the Federal Department for Transport and Energy «Dienst für Gesamtverkehrsfragen», under the title «Alpinfo» (GVF-News). It can be ordered by telephone 031 322 40 60, by fax 031 322 78 69).
