Forest flora of Zambia

FRANK WHITE

The first edition is now out of print. In April 1973 I visited Zambia to discuss the scope and contents of a second edition with members of the Forest Department and other Government officials. It was decided that the new edition will differ from the old as follows:

1. only commercially important and commonly grown exotic species will be included;
2. the smaller shrubs and climbers will be omitted;
3. keys will be provided for all species of all genera;
4. for all species much more information on field characters and distribution and ecology will be given;
5. all important genera will be illustrated.

To-date 30 additional plates of line drawings have been completed. Mr. D. B. Fanshawe has now provided extensive field-notes on all indigenous species. Large collections of beautifully preserved material have recently been made by Professor J. Kornaś, Kraków, and Professor A. Strid, Copenhagen.
