Do more in less time.

With Wild automatic levels.

Surveying is easier, quicker and more accurate with Wild automatics. Just centre the circular bubble and read the staff. It's as simple as that, because the Wild compensator sets the line of sight horizontal – automatically! Small ground movements and vibrations have no influence, thanks to the highly efficient damping system. Imagine how much easier levelling becomes on the construction site; trucks, bulldozers, and unstable ground have no effect on either the accuracy or progress of work. And to give you that 100% feeling of confi-

dence, we've built in a unique press-button control that enables you to check the functioning of the compensator.

Read about the NA0 (NAK0) Small Automatic Level, the NA1 (NAK1) Engineer's Automatic Level and the NA2 (NAK2) Universal Automatic Level in brochures G1 149e and G1 108e. Wild automatics are available both with (K-models) and without a horizontal circle. They are accurate, robust and reliable – Wild precision and years of manufacturing experience take care of that.
