# **ARBED ROLL TAILOR-MADE BEAMS**

More or less is hardly precise. If you're talking construction, you're talking precision. In any steel-frame structure, the only ideal beam is the one that matches the dimensional and stress requirements of the laws of statics. No more, no less. And if standard beams can't meet these demands, other beams have to be produced: tailor-made beams, developed and manufactured by ARBED for precision building.

Rolled by ARBED on modern universal mills, these beams complete one of the most comprehensive rolling programmes in Europe.

If you'd like to know more about ARBED's tailor-made beams or steel sections, get in touch with our sales organization.

# Survey today – the future

## way: Wild Tachymat® TC1

The complete survey system for measuring, recording and transferring data to the computer.

Angle and distance measurement are fully electronic. The Tachymat measures and displays: Hz and V angles, slope and horizontal distance, difference in height, height above datum, and coordinates. For setting out, it tracks horizontal angle and horizontal distance.

With the recording unit attached, measured data, code and other information are recorded. Over 1800 points/blocks of information can be recorded on a cassette. And as cassettes can be inserted as required, the capacity is limitless. It's the most flexible, cost-effective

recording and data-storage system. The Tachymat is a field instrument. Rugged, reliable, accurate, designed for the surveyor. The latest technology coupled with Wild's years of experience in manufacturing surveying equipment see to that. And it's super to operate; just touch a key to measure and another to record.

The Wild Tachymat TC1. Available now for today's surveyor. Ready for tomorrow's requirements.
