# Survey today – the future way: Wild Tachymat® TC1

The complete survey system for measuring, recording and transferring data to the computer. Angle and distance measurement are fully electronic. The Tachymat measures and displays: Hz and V angles, slope and horizontal distance, difference in height, height above datum, and coordinates. For setting out, it tracks horizontal angle and horizontal distance. With the recording unit attached, measured data, code and other information are recorded. Over 1800 points/blocks of information can be recorded on a cassette. And as cassettes can be inserted as required, the capacity is limitless. It's the most flexible, cost-effective

recording and data-storage system. The Tachymat is a field instrument. Rugged, reliable, accurate, designed for the surveyor. The latest technology coupled with Wild's years of experience in manufacturing surveying equipment see to that. And it's super to operate; just touch a key to measure and another to record. The Wild Tachymat TC1. Available now for today's surveyor. Ready for tomorrow's requirements.
