Nutzungsbedingungen

Die ETH-Bibliothek ist die Anbieterin der digitalisierten Zeitschriften auf E-Periodica. Sie besitzt keine Urheberrechte an den Zeitschriften und ist nicht verantwortlich für deren Inhalte. Die Rechte liegen in der Regel bei den Herausgebern beziehungsweise den externen Rechteinhabern. Das Veröffentlichen von Bildern in Print- und Online-Publikationen sowie auf Social Media-Kanälen oder Webseiten ist nur mit vorheriger Genehmigung der Rechteinhaber erlaubt. [Mehr erfahren](#)

Conditions d'utilisation

L'ETH Library est le fournisseur des revues numérisées. Elle ne détient aucun droit d'auteur sur les revues et n'est pas responsable de leur contenu. En règle générale, les droits sont détenus par les éditeurs ou les détenteurs de droits externes. La reproduction d'images dans des publications imprimées ou en ligne ainsi que sur des canaux de médias sociaux ou des sites web n'est autorisée qu'avec l'accord préalable des détenteurs des droits. [En savoir plus](#)

Terms of use

The ETH Library is the provider of the digitised journals. It does not own any copyrights to the journals and is not responsible for their content. The rights usually lie with the publishers or the external rights holders. Publishing images in print and online publications, as well as on social media channels or websites, is only permitted with the prior consent of the rights holders. [Find out more](#)

Yet it does move...

The surveyor behind Kern's new ME 5000 Mekometer has every right to remember Galileo Galilei's historic words. Dams, for example - as monumentally as they may seem to be implanted in their surroundings - do move. Normally by negligible amounts, but sometimes dramatically.

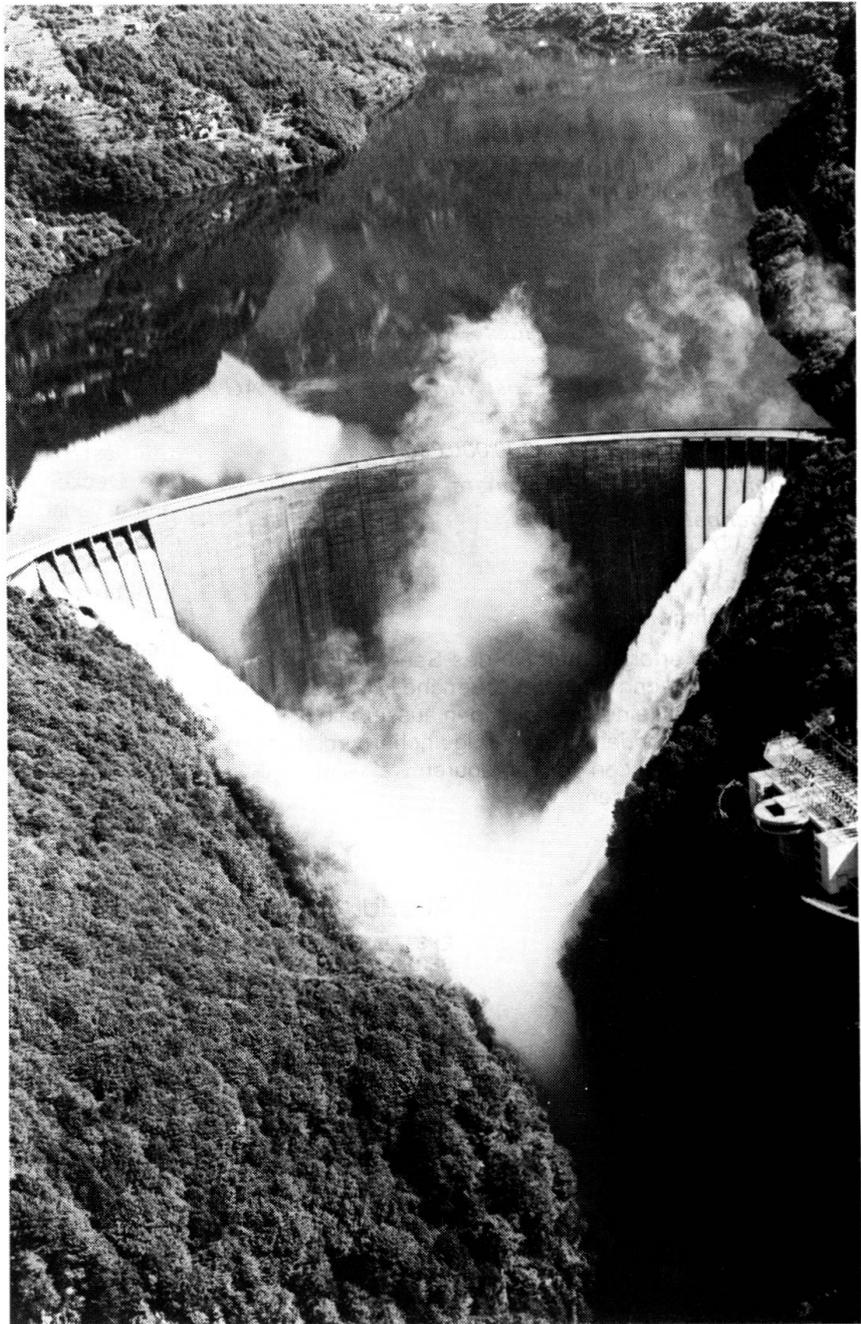

You can detect shifts to fractions of a millimetre with a Kern ME 5000 precision distance meter. And you get results with the dependability and reliability needed to monitor structures of such magnitude. The new Mekometer conducts measurements completely automatic without an operator's intervention during the measuring cycle. It has a range of up to 8 km.

The remarkable accuracy of this instrument - $\pm (0.2 \text{ mm} + 0.2 \text{ mm/km})$ - is based on the use of a helium-neon-laser beam and one single crystal for modulation and demodulation. At distances exceeding 200 m, the Mekometer, an 11 kg featherweight, easily outperforms one-second theodolites in point surveys.

An RS232 communications interface makes it possible to record measurements on external media and remotely control the instrument.

Yet it does move: a statement that made history. The ME 5000: a precision distance meter that will make history.
