EDITORIAL

It is already 3 years since your Editor has taken over the job of producing this magazine. During this time several members have asked your Editor how a magazine like the Helvetia is actually put together. As this question might interest other readers, here is a description in broad terms of the procedure involved.

It all starts with the collection of suitable material by perusing dozens and dozens of Swiss newspapers and magazines kindly supplied to your Editor by the staff of the Swiss Embassy without whose support the Helvetia could not exist in its present form. Suitable articles and photos are cut out and, as most articles are written in German or French, they have to be translated into English and edited at the same time in order to shorten and adapt them to fit into the format of the magazine. Even before you get the present copy of your Helvetia, this work is already in full progress for the next issue. In fact this work starts the day after the current issue has been handed over to the typesetter and the printer, so there is practically no let-up between issues. It is a continuous job and, when your Editor accepted the job, he realised that he had to put aside any thought of a holiday for the following 5 years otherwise the magazine would simply not appear.

For each issue, your Editor also has to dream up an Editorial, a task which is

often undertaken while driving to and from work. Sometimes the inspiration also comes during the night, in which case he writes it down quickly in the dark (so as not to awaken his wife) only to scratch his head in the morning because he cannot decipher what he had scribbled down in the darkness of the night. Luckily, so far at least, your Editor has not yet run out of ideas for this part of the magazine.

Once a good stock of articles has been written up, your Editor types them into a computer and then proof-reads them all very carefully to try to eliminate as many errors and misspellings as possible. The proof-reading is done in two steps. First you read the text to make sure it all makes sense, that the sentences follow in a logical sequence and that everything is grammatically correct. Then you read it a second time, but this time, word for word, looking for spelling mistakes (by that time you are a bit blurry eyed and unfortunately, the odd mistake still manages to slip through).

Once the proof-reading is done, it is back to the computer to enter the necessary corrections in the texts. In the meantime, all advertisements are collected and a final selection of photographs is made.

By the 15th of the month, the Club news items arrive at your Editor's office, either by mail or by fax. Then the real scramble starts because from this point on your Editor has only 3-4 days

left to finalise his job otherwise the magazine would not come out on time. All these Club items have to be quickly typed into the computer and proof-read for mistakes.

Then armed with all the articles, photos, advertisements and Club news items, your Editor then proceeds to make the layout of the magazine. This is like a jigsaw puzzle where every item has to be slotted into its right place. Sometimes you are lucky that everything just falls into place nicely. Other times, you can sweat for hours over just one or two pages when nothing seems to work out and nothing wants to fit into the space you have left available. As time is pressing, this job often goes right into the night and, on occasions, right through the whole night.

Once everything is in place, it is back to the computer to transfer the whole lot onto a floppy disc, then, with floppy disc and layout pages, your Editor is off to Fred, the Typesetter. On his special typesetting computer, Fred can juggle with the texts, enlarge, reduce, change the style of the lettering, decide on the style and size of the headings and put in the necessary instructions for the Printer, a job that takes quite a few hours. Then all the pages, minus the photos, are printed out on a laser printer and then everything, including the photos goes to Peter Schüpbach, the Printer who produces the final article which you are now holding in your hands.

All in all, your Editor spends around 50-60 hours on every issue. Unfortunately, as your Editor has to work some 12 hours a day, 6 days a week at his own job to earn his living, the work on the Helvetia magazine is mostly done

SWISS SOCIETY OF NEW ZEALAND

PATRON: Mr. Ernst Thurnheer, Ambassador of Switzerland

in the evening, at night and on Sundays. This leaves him no time for even a few days off, nor much time either for socialising for that matter. Most of his spare time is devoted to your magazine. So next time you enjoy a Club fondue evening, a Club sport competition or a Fasnachtsball, spare a thought for your Editor who is most likely furiously typing into his computer the results of your Club's shooting competition!

So there you are, the full story behind your magazine. It is a good, interesting but very demanding hobby. But your Editor gets the moral satisfaction that in a small and unassuming way, far away from fanfares, limelight, glory and honorary titles, he can perhaps bring some pleasure into your homes and possibly contribute a little towards a closer unity amongst the Swiss in New Zealand.

SWISS SOCIETY AGM

As most of the Clubs have reported on it (see under Club News starting on page 6) we abstain from a further report. Only one puzzle for all those who did not or could not attend: The duration of the AGM. Depending on which report you read, the AGM lasted 25 minutes, 30 minutes and 45 minutes. What happened to the Swiss watch precision? Or were some of the attendants sporting not-so-accurate Japanese watches????

Whatever! The main news from the AGM is that you will from now on receive 10 issues of the Helvetia Magazine each year. Therefore, as from now, the two months where no magazine will be issued will be August and January.

FAREWELL TO PETER AND DAGMAR GRAF

Diplomats come and go, that is the nature of their employment. Some are quickly forgotten, but others leave a long lasting impression behind. Peter GRAF is certainly one of these diplomats who we will keep a pleasant memory of long after they have left our shores.

After 5 years in his position in Wellington, Peter and his wife Dagmar have left us for a new post in Teheran. In many ways Teheran is certainly a more important mission than Wellington but on the other hand, life in Iran will most likely not be as pleasant and easy going as in New Zealand.

Peter and Dagmar are quite aware of that, but Peter, the good humoured optimist as he is, can always wring out a good point out of a bad situation. Peter's comment was "Life may not be as pleasant in Teheran as in Wellington, but at least we are only a few hours away from Switzerland, so we can always go there for a weekend if we need to emerge ourselves again into western civilisation." We will miss Peter's down-to-earth sense of humour.

It was your Editor's sad pleasure to farewell Peter and Dagmar at Auckland Airport on their departure to Teheran. Just a last, quiet drink in the Airport bar and a friendly but solid Swiss hand-shake to send them off on their way. However they appreciated this quiet sending-off after the tumultuous one they had in Wellington where half the Swiss Club turned up at the airport with music and cow-bells.

We wish them both good luck in their new position.

RIGI RAILWAY LIKE IN 1871

In 1996, as part of the 125 year celebrations, the last cogwheel steam engine in the world will be put back into operation to again carry steam engine enthusiasts up the Rigi.

The Vitznau-Rigi-Bahn is the world's oldest cogwheel railway and until 1937, when it was electrified, all transport was done by steam engines. The 1996 celebrations will be held under the lucky number 7.

Originally 7 locomotives, of which number 7 is still alive, had been built. The maximum speed was 7 km per hour. Engine number 7 was put into operation on a 7th. of March. The start of the celebrations will be on May 7 1996 with the official ceremony taking place on May 14 1996. A maximum of 700 tourists per day will be able to use this mode of transport from the past and for this privilege, they will have to pay a "steam engine surcharge" of SFR 7.- (these Swiss really think of everything to make some extra money...)

Steam engine number 7 will again puff up and down the Rigi. It weighs 15 tons. These locomotives, because of their peculiar looks, were quickly and irreverently nicknamed "Fahrende Schnapsbrennerei". Looking at the picture, you must admit, there is some similarity. In 1939 engine number 7 had been on display at the National Exhibition (Landi) in Zurich and since 1959 its home has been the Transport Museum in Lucerne.
