Fig. 9.2. Geneva Emotion Wheel (GEW) was used to assess emotion associations with colour terms and to evaluate the

intensity of associated emotions with circles of increasing size. The figure displays results for all 12 colour terms of participants coming from the modern-day Italy (A&B), Greece (C&D), and Turkey (E&F). Covered area of each emotion ray indicates the average intensity of the associate emotion. Emotions with a larger covered area were more often associated with the given colour term.
