### A NEW SURFACE HARDENING

#### PROCESS

During the last few years, the Swiss Horological Research Laboratory in Neuchâtel has perfected a process for hardening surfaces, in particular metallic ones. These results have found useful applications in the field of watch-making and other industrial sectors. Thus, for example, the Sandvik metallurgical works in Sweden, which recently commissioned the Swiss Horological Research Laboratory to carry out a big research project for them in this field, have announced that it has been possible for them to obtain an appreciable improvement in their cutting tools. This firm also stated that it was the biggest advance achieved in this field during the past ten years.

(O.S.E.C.)

### NEW CONTRACTS

The Buss Co. Ltd. Engineering Works in Basle signed contracts at the end of 1968 for the supply of two plants for the preparation of carbon electrode masses for the production of crude aluminium. These are continuous mixing and kneading appliances, the biggest ever built for the purpose; the value of the whole consignment will exceed 4 million Swiss francs.

The Vaudois industrial group *Paillard Co. Ltd.* and the Belfort Multi-copying Company belonging to the Japy group have just signed an agreement giving the Swiss firm the majority of the share capital of the French firm. This transaction is the culmination of the co-operation started by the two companies right after the second world war, for the purpose of gradually harmonising their manufacturing programmes.
