# REALITYSHOW(S)

Giulia Scotto & Marco Zelli

*«The presence of others who see what we see and hear what we hear assures us of the reality of the world and ourselves.»*

—Hannah Arendt, *The Human Condition*.

Despite the etymology of the word (from Latin *res*: «matter, thing, good»), «reality» is not only about physical substance as opposed to the immaterial and the virtual. By adopting the Platonic construction of «reality», medieval Scholasticism introduced a radical shift in the original use of the term and defined reality as the set of our collectively shared notions.

If the word «reality» related to TV-shows suggests a third meaning, namely the lack of a fictional plot, it is worth noticing how these kind of shows produce reality by means of spreading shared values. Cooking talent shows represent a particularly brilliant example of this dynamic. The more we watch them, the more a certain form of «creative cooking» becomes part of our social everyday life; we buy recipe books, we exchange views about food preparation, famous chefs, and restaurants.

Thanks to TV shows, cooking became a noble and even prestigious activity. The purists of the discipline might consider such shows as a form of prostitution, but, as a matter of fact, they are spreading a sort of «cooking culture» which is now part of our collective conscience. Cooking talent shows transformed a necessary labor into a transcending activity, on a wide scale.

As Cedric Price noticed, both architecture and cooking imply the projection of a desire in the future; they both produce an immediate feedback on the «user» and, more importantly, they both are essential to our survival. However, architecture suffers from a lack of a common consciousness about its importance and potential; it lacks a sense of «belonging» to the world of shared ideas we call reality.

Many aspects of architectural practice are unknown or largely misunderstood by the majority of the population that consider architects' behaviour snobbish and their language incomprehensible. Architects, on the other hand, blame the ignorance of their clients for their failures and frustration, whilst enjoying the romantic feeling of elitist isolation.

We believe in the necessity of establishing a dialogue between these two seemingly irreconcilable positions and of replacing the architects' complaining attitude with a more proactive engagement.

What if we applied the «reality show effect» to architecture?

Marco Zelli is a practicing architect based in Zurich. After completing his studies at the IUAV University of Venice, he worked in several offices in Portugal, Japan, and Switzerland. In 2018 he co-founded the Forum for Architecture Theory (F.A.T.)

Giulia Scotto is a PhD candidate and research assistant at the Urban Studies department of the University of Basel. After completing her studies at the IUAV University of Venice, she collaborated with OMA, with the UTT Chair of architecture and Urban design at ETH Zurich and with KCAP architects&planners.
