*Three
Swiss telephone sets
for best
safety performance*

This local battery telephone set is used for point-to-point connections wherever no mains power supply is available.

Its independence from mains power supply makes this appliance the optimum solution in the following fields:

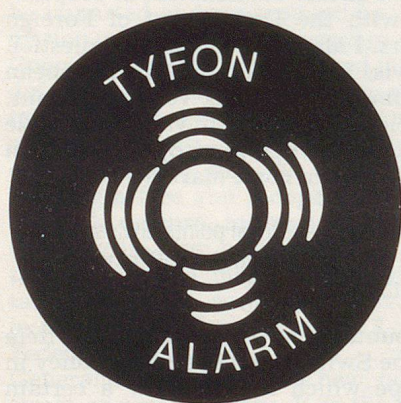

- as an emergency telephone in power stations, in tunnels, from buildings to other buildings, in hospitals to the important supply centres;
- in civil protection;
- for military applications;
- and others.

This local battery telephone set is available in three versions: as a table set, as a mural set and as a rugged, heavy-duty mural set which supports dusty, rough, humid, cold or hot climatic influences.

Experience shows over and over again how much importance is placed on the reliable operation of alarm systems. Kockum Sonics has been building alarm systems for 70 years now for such widely different purposes as civil defence, fire services, industrial organisations (nuclear plants), water alarms (dams) and early warning systems for storms, flooding, earthquakes, etc. We manufacture pneumatic and electronic installations for stationary and for mobile

operation. Our siren systems are notable for their long range and ideal sound distribution. They are maintenance-free and operate reliably under power failure conditions even in the face of extreme climatic conditions.

Over 20 000 TYFON and TYFONIC alarm systems for civil defence purposes and some tens of thousands on ships and locomotives throughout the world are proof of the quality of our products. Our systems are partially produced when-ever possible in the intended country of use.

All types have been officially tested and approved.
